

Environmental Responsibility

Improved Materials: PET Fiber Polymers and Recycled Steels

- Libman is now using a polymer that contains 80% recycled PET on all items that contain a plastic fiber.
- Usage of recycled drink and food containers eliminating landfill waste.
- Product improvements: more fiber weight and density leading to longer fiber life.
- All steel handles are now made with 70% recycled steel further reducing landfill waste without compromising durability.

How does Libman do this? We manufacture most product components including fiber extrusion and handle fabrication processes.
